Qalxan

Stops scam SMS campaigns before they reach your subscribers

Detects scam SMS in Azerbaijani, Russian and English, groups them into campaigns and lets the operator block them in one click.

Working prototype: 54 of 54 scam SMS caught live, keyword filter 17

Team La Furia Roja

Qalxan means «shield» in Azerbaijani

THE PROBLEM

Scam SMS reach thousands before anyone reacts

+994 70 8•• •• ••

Kapital Bank: Kartınız bloklanıb. Bərpa üçün keçid edin: kapitalbank-az.online

+44 7•••• ••••

Azerpost: 10.2 AZN gömrük rüsumu ödənilməyib: azerpost-gomruk.com

+994 55 •••

Мама, это мой новый номер. Срочно нужно 300 AZN...

WhatsApp

Tap.az: Alıcı ödəniş etdi. Kartı təsdiqləyin: tapaz-pay.top

Real scheme types officially warned about in Azerbaijan. Senders masked.

30%

of scam SMS caught by today's keyword filters

- Blocklists updated by hand, hours to days late
- One swapped letter beats a keyword
- Subscribers lose money, operators lose trust

THE SOLUTION

Catch the campaign, not just the message

01 → 02 → 03

Detect

Understands the scheme in AZ / RU / EN, whatever the wording or letter swaps

Group

Joins messages into campaigns: brand, domains, phones, speed

Act

One click blocks the campaign and warns everyone who received it

Today

Hours to days, after subscribers complain

With Qalxan

Seconds from the first SMS

OUR PRODUCT

Qalxan at a glance

Overview

An AI radar next to the operator's SMS firewall: it scores every message, explains why, and turns scam traffic into campaigns.

Who uses it

- **Anti-fraud analyst**
  web dashboard: campaigns, block, warn
- **Subscriber**
  Telegram bot: forward an SMS, get a verdict

Mission

Make every scam campaign visible and stoppable within minutes, in the languages people here actually write in.

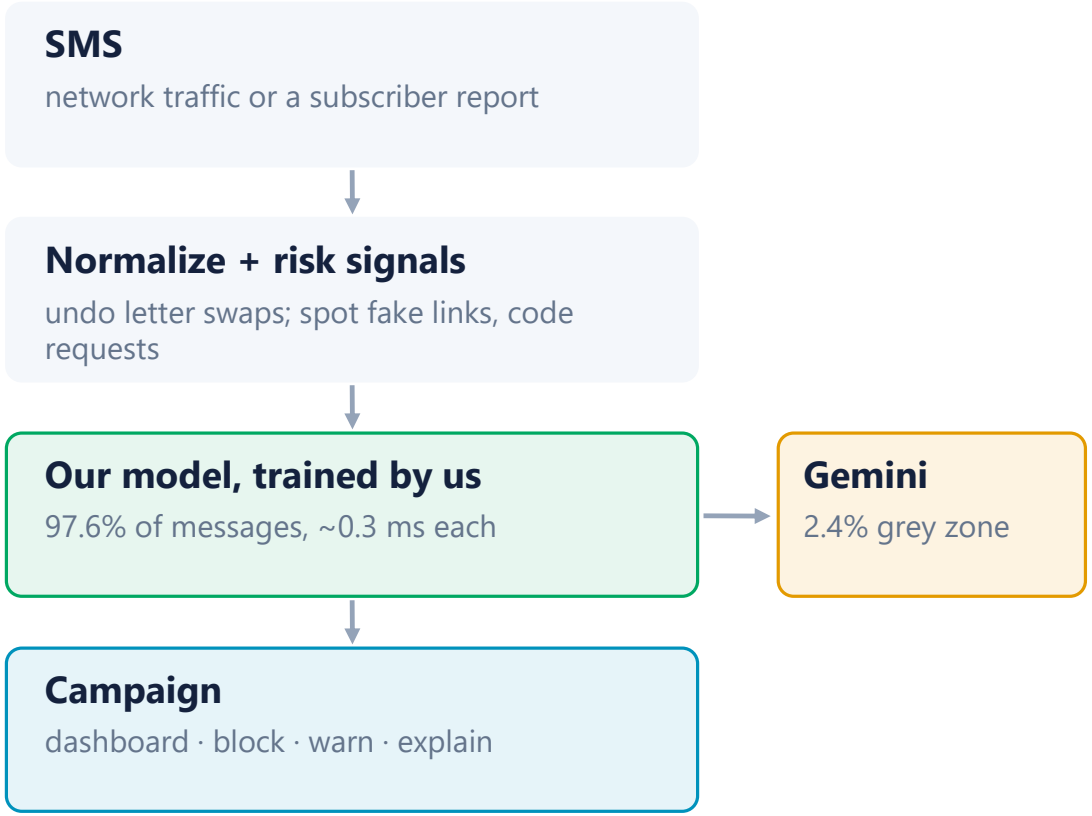

Vision

One shield for every subscriber in the region: operators, banks and people sharing one live picture of scams.

FEATURES AND HOW IT WORKS

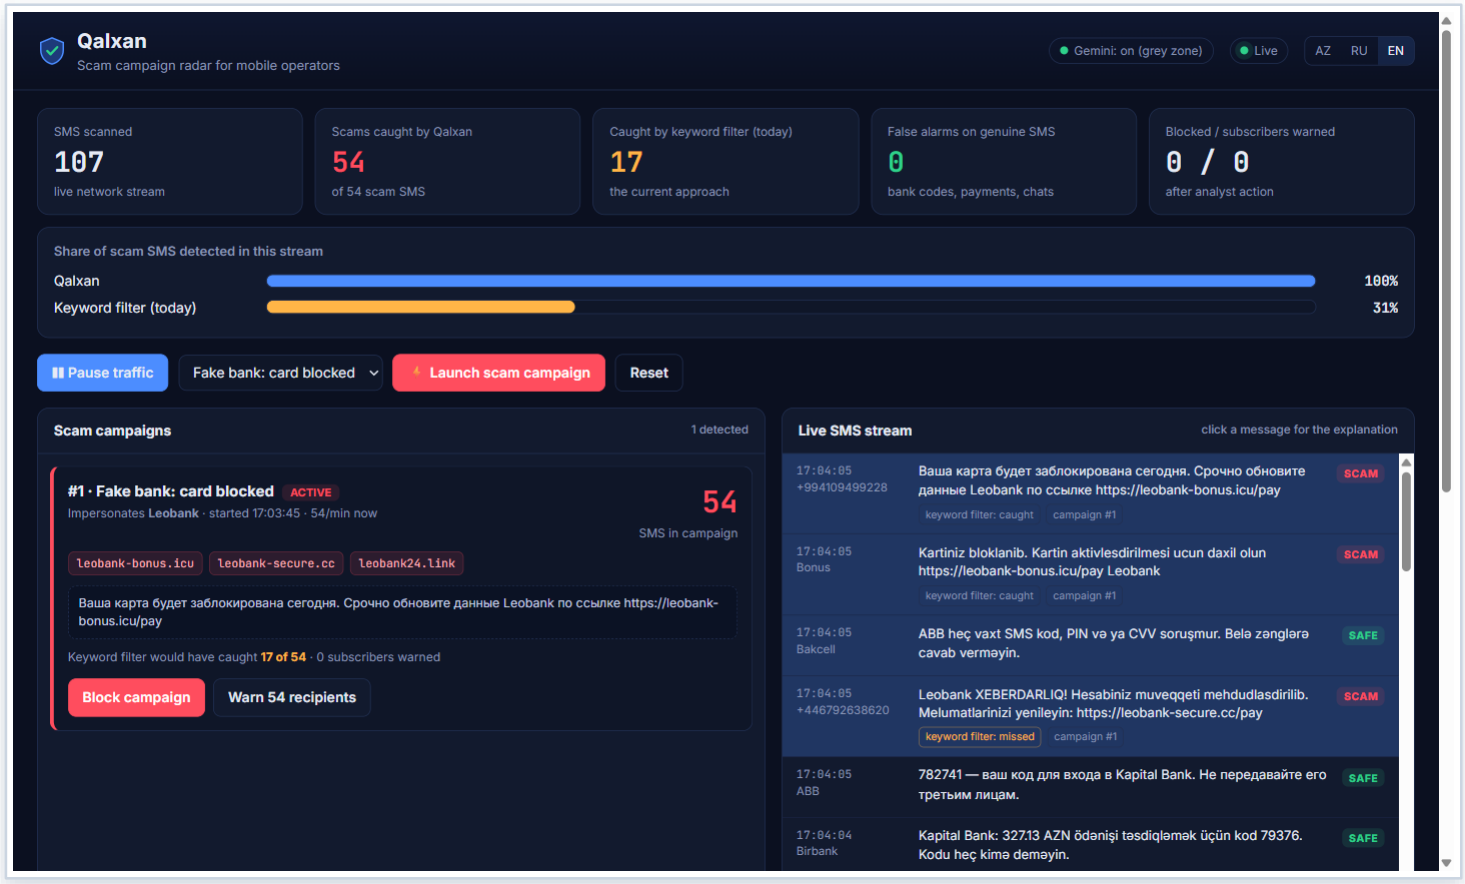

Our model decides, Gemini double-checks

- **Scam detection in AZ / RU / EN**
  survives letter swaps and rephrasing
- **Campaign grouping**
  brand, domains, phones, rate
- **One-click actions**
  block a campaign, warn recipients
- **Explanations**
  why it is a scam, in 3 languages
- **Telegram bot**
  subscribers check any SMS

WORKING PROTOTYPE

Live: a scam campaign hits the network

1 **Normal traffic**
bank codes, payments, chats

2 **The attack**
60 scam SMS, 3 rotating fake domains

3 **Seconds later**
one campaign card: 54 / 54 caught, keyword filter 17

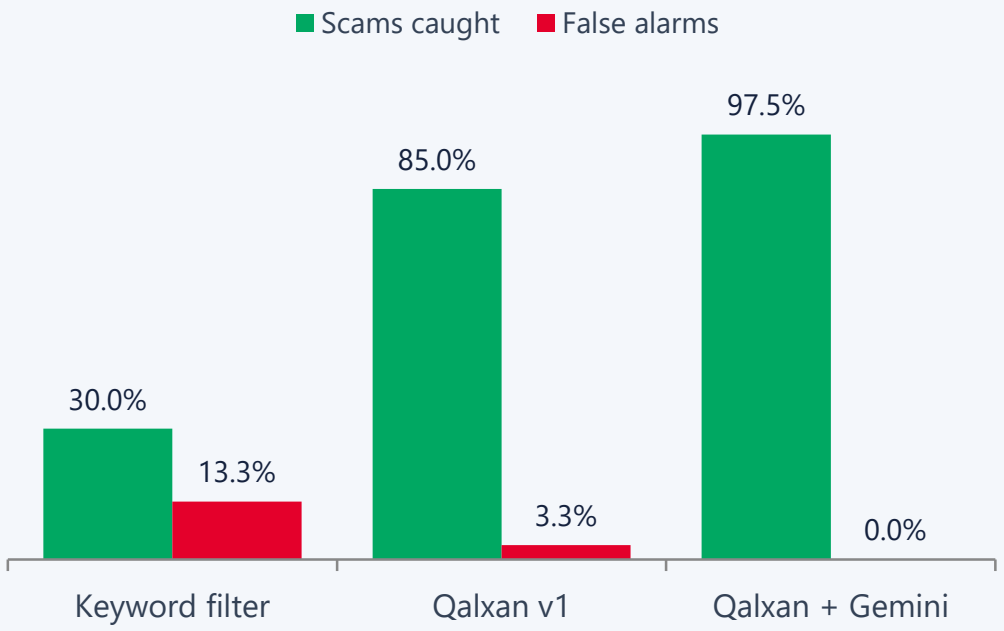

4 **Analyst acts**
block, then warn every recipient

QUALITY TESTING

Tested against what operators use today

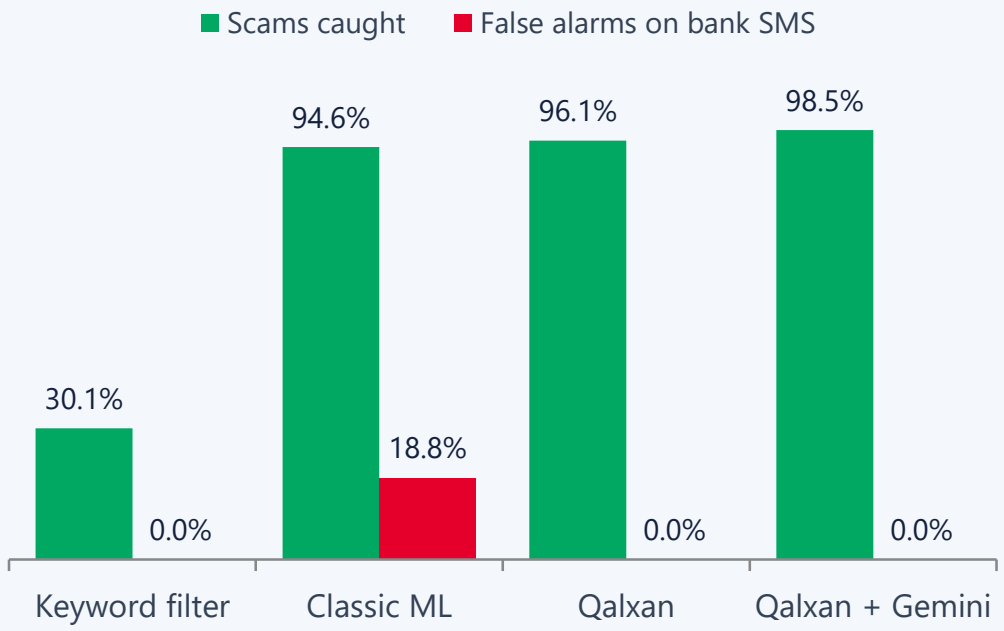

Test 1 · 70 SMS

real schemes documented by Azerbaijani authorities

Test 2 · 873 held-out SMS

with traps: real bank codes, payment alerts, fines

Test phrasings never appear in training · Gemini consulted for only 2.4% of messages

QUALITY TESTING

What broke, and what we changed

Missed new schemes that ask for data, not a click: «tell us your card digits», «install AnyDesk»	→ Such requests now always get a Gemini second opinion **85% → 97.5%**
Flagged a genuine Netflix payment alert as a fake link	→ Well-known merchant domains are trusted **3.3% → 0% false alarms**
Still missed: an investment pitch with only a Telegram handle	→ Retrain on real reports during the pilot

MARKET SIZE

A global problem with a market that already pays

THE PROBLEM

$442B

lost to scams in one year; 23% of adults lost money

GASA & Feedzai, 2025

MARKET

~$3B

spent by operators on SMS firewalls every year

industry reports, 2024–25 ($2.7–3.6B)

OUR START

12.3M

mobile lines in Azerbaijan across 3 operators

GSMA Intelligence / DataReportal, 2026

Next markets: Central Asia, Türkiye and the GCC, with the same schemes and language mix

BUSINESS MODEL

The operator pays, brands join

1

Operator license

Annual on-premise license, priced by subscriber base, plus support

2

Brand protection

Banks and Azerpost pay for real-time alerts when their name is faked

3

Scam Shield add-on

Operator sells protection to subscribers; we share revenue

Unit economics

Near-zero cost per SMS: an LLM is needed for only 2.4% of traffic

Pricing

Set together with the first operator during the pilot

PRODUCT MILESTONES

From prototype to the region

Oct 2026

DONE

Prototype, own model, 2 test sets

Month 1

PLANNED

Pilot with one operator

Months 2–3

PLANNED

Shadow mode on live traffic, retrain

Months 4–6

PLANNED

Paid license, brand alerts

2027

PLANNED

Central Asia, Türkiye, GCC; voice calls

Pilot success: time to block a campaign · scams caught vs blocklist · zero false alarms on bank SMS

WHY THIS WORKS

Why Qalxan can win

Proven

30% → 97.5% vs today's keyword filter, zero false alarms on bank SMS

Private and cheap

runs on the operator's servers; 97.6% of traffic needs no API

Built for Azerbaijan

AZ / RU / EN, letter swaps, local brands and schemes

Actionable

one card per campaign; every verdict explained

Disclosure: own TF-IDF + logistic regression model trained at the hackathon · Gemini for grey-zone checks · Claude as coding assistant · synthetic and documented-scheme test data, no subscriber data · FastAPI, scikit-learn, aiogram
